

MAKERERE UNIVERSITY BUSINESS SCHOOL
FINAL EXAMINATION FOR THE DEGREE OF
BACHELOR OF BUSINESS COMPUTING
OF MAKERERE UNIVERSITY ACADEMIC YEAR 2017/2018

COURSE NAME: SYSTEMS ANALYSIS AND DESIGN YEAR OF STUDY: 2

COURSE CODE: BUC 2101

DATE: 1st December 2017

SEMESTER: 1.

TIME: 1:00 PM - 5:00 PM

Answer any FOUR questions

Question 1:

- With an illustration, explain the difference between the triple and diamond constraints project management. (5 marks)
- Truman's triangle is used as good guide in designing a network. With an illustration, explain why this triangle is very important. (5 marks)
- As a system analyst you are likely to be appointed a Project Manager of an informatic system in an organization. Discuss the different phases in project management and at least five (4) activities in each of these phases, you will be undertaking in the management of this project. (15 marks)

[Total = 25]

Question 2:

- Explain the relevance of a system boundary in input-output computer user interface design. (5 marks)
- With examples, describe the difference between tangible and intangible benefits and costs. (5 marks)
- Using the example of an online mobile apps store such Google store play:
 - List relevant data flows, data stores, process, and sources/sinks (5 marks)
 - Draw a context diagram and a level-0 diagram that represent the apps store (8 marks)
 - Explain why you choose certain elements as processes, sources/sinks, data stores, data flows

Question 2:

- a) Explain the relevance of a system boundary in input-output computer user interface design. (5 marks)
- b) With examples, describe the difference between tangible and intangible benefits and costs. (5 marks)
- c) Using the example of an online mobile apps store such Google store play:
 - i) List relevant data flows, data stores, process, and sources/sinks (5 marks)
 - ii) Draw a context diagram and a level-0 diagram that represent the apps store (8 marks)
 - iii) Explain why you choose certain elements as processes versus sources/stores (2 marks)

[Total = 25]

Scanned with
CS CamScanner

Question 3:

- a) System development life cycle (SDLC) is a process of understanding how an information system can support business needs, designing the system, building it and delivering it to the user. Discuss the different phases that are in the system development life cycle. (10 marks)
- b) System implementation is one of the phases in the system development life cycle. Discuss the seven (7) activities that are undertaken in this phase (15 marks)

[Total = 25]

[Total = 25]

Question 4:

- a. Briefly describe a complete computer-based information system in terms of its components (5 Marks)
- b. Justify with five reasons the importance of studying systems analysis and design (5 Marks)
- c. What roles do system users, designers and builders play in information systems development project? (9 Marks)
- d. Explain the term "Problem" in three different perspectives in information systems development (6 marks)

[Total = 25]

Question 5:

- a. Justify the importance of systems analyst in information systems development project (4 Marks)
- b. Explain any five qualities of a modern systems analyst (10 marks)
- c. What duties does systems analyst perform in information systems development project? (5 Marks)
- d. Explain any three factors that must be taken into consideration when developing information system (6 Marks)

[Total = 25]

Question 6:

- a. What is system development methodology? (3 marks)
- b. Describe the following system development methodologies with graphical illustrations.
 - i. Prototyping (7 marks)
 - ii. Throw-away Prototyping (7 marks)
 - iii. Waterfall model (8 marks)

[Total = 25]

*****THE END*****
