- Discuss the potential benefits that companies implementing a proper e-Business strategy will most likely enjoy unlike their counterparts who don't. **[7 Marks]**

• Question Three

In Uganda, public sector procurement is a significant component of public expenditure management, which plays a critical role in ensuring effective service delivery, good governance, and sustainable development. Public sector procurement accounts for up to 60% of the Government of Uganda's expenditures. Increased uptake of digital public procurement could offer many opportunities to streamline processes, therefore the electronic government procurement (EGP) was designed to digitize the procurement and disposal process in Ministries, departments and agencies of Government. EGP has been deployed in 25 institutions and continues to be rolled out across the entire Government of Uganda.

Required;

- Briefly explain e-procurement and describe any four modes integral to it. **[5 marks]**
- Describe the benefits that the Ugandan government and the East African Community derive from deploying e-procurement within its processes. **[10 marks]**
- Discuss the potential challenges organizations may face when transitioning from traditional procurement to e-procurement. **[10 mark]**

Question Four

A retail company has recently expanded its operations online and wants to leverage data analytics to improve its e-marketing strategies. The company hopes to better understand customer behavior, tailor marketing efforts, and boost online sales by analyzing customer data, website interactions, and social media engagement. The marketing team is tasked with using data insights to optimize their campaigns and assess performance over time.

Required;

- Explain the six (6) roles of data analytics in e-marketing. **[13 marks]**
- Discuss five (5) key performance indicators (KPIs) and metrics that are essential for evaluating e-marketing effectiveness. **[12 marks]**

- b) Discuss the factors that have contributed to the increased adoption and use of e-commerce by both individuals and Organisations today. [10 Marks]
- c) Examine any five (5) e-commerce challenges faced by businesses and individuals today as they conduct business. [10 Marks]

Question Three

Disintermediation is the process of cutting out one or more middlemen from a transaction, supply chain, or decision-making process. Online disintermediation often attempts to cut out the wholesaler and retailer and can sell products directly from the manufacturer. Disintermediation can have a number of benefits for customers, as well as for manufacturers.

- a) Discuss 6 (six) factors an organisation like Jumia will have to consider while formulating an e-business strategy. [12 marks]
- b) Explain disadvantages that Jumia customers will face as they bypass retailers in the value chain. [13 marks]

INSTRUCTIONS

- ❖ Answer Any **FOUR (04)** questions
- ❖ Each question carries 25 marks
- ❖ Use of practical examples will earn you extra marks
- ❖ Start each question on a new page.

Question One

The development of e-commerce is becoming a strategic factor for economic development for many countries. However, this requires regular monitoring and analysis of trends, dynamism and changes of direction. Uganda, is an interesting case in illustrating some of the opportunities and the main barriers to the development of e-commerce based on national research. While exploitation of available infrastructure to develop e-commerce is dependent on necessary the environment, legislation and use of standards, the real impact is the appropriateness of services and applications used by the private sector and public administration to meet local, regional and national societal requirements.

Required;

- a) Examine the cultural, legislative, technological or other barriers that exist to the successful adoption of e-business in Uganda. **[13 marks]**
- b) Discuss the key gaps that exist between e-services provided by national and regional or local government activities. **[12 marks]**

Question Two

There are several reasons and benefits of implementing an e- business / e-commerce strategy. E-commerce will most often provide access to a global audience, which may generate a broader selection of customer groups and competitive pricing (Kalakota & Robinson, 2001). Qin et al. (2014) states that e-commerce generally facilitates operational costs, increase productivity and make remarkable improvement in efficiency of economic operations. With this said, implementing an e-commerce strategy successfully may provide fruitful results. What stands between an 'old economy' organization and the potential benefits, is the challenge of a new strategy implementation. A successful implementation of an e-commerce strategy may result in the related
