

MAKERERE UNIVERSITY
MAKERERE UNIVERSITY BUSINESS SCHOOL
FINAL EXAMINATION FOR BACHELOR OF BUSINESS COMPUTING OF
MAKERERE UNIVERSITY, ACADEMIC YEAR 2024/2025

COURSE NAME: WEB APPLICATION DEVELOPMENT

YEAR OF STUDY: II

SEMESTER: II

TIME: 2PM – 05PM

COURSE CODE: BUC2231

DATE: MAY 9, 2025

SHIFT TWO

INSTRUCTIONS

- i) This is a practical examination. Answer ALL questions in this exam.
 - ii) Create a folder on the **desktop** in your name and registration number where all your project files will be stored for **section A**. *For example, if your name is James Mwanga and your registration number is 22/U/5432/PS, your folder name would be jamesmwanga22U5432PS. Notice that there are no spaces or forward slashes in the folder name. Any file saved outside this folder can't be accessed for assessment.*
 - iii) Continuously save your work to avoid any interruptions in case of power outages.
 - iv) You are allowed to sit for **ONLY ONE SHIFT** of the examination.
 - v) All resources needed (photos, videos, frameworks) are provided on the desktop in the resources folder. Copy and paste inside your project folder.
 - vi) Don't write on this question paper. All other university examination guidelines still apply.
-

Question

You have been tasked with developing a responsive one-page website for ***Travel the World***, a travel company that allows users to book trips through its platform. The homepage should present an engaging introduction to the company, display a clear and prominent "Download App" button, and feature a booking section where users can enter their name, email, and selected tourist site. Refer to the layout shown in figure 1 for design guidance. The reference is for structure and style only—do not include the actual image in your website. Ensure the final webpage closely reflects the design and layout in figure 1.

SECTION A – 60 marks

HTML (20 marks)

- a) Using HTML, create a structured webpage featuring a header section with the Travel World logo and a tagline that reads "Explore". Include a supporting paragraph welcoming users to Travel World as the ultimate guide to exploring the globe, along with a Download App button and a Plan Your Trip link. Additionally, incorporate two travel-themed images on either side of the header to highlight exploration. Next, create a "Make your booking early!" section with a form containing three fields: Name, Email, and Tourist Site. Conclude the page with a footer section that includes copyright information.

CSS (20 marks)

- b) Style the webpage using your own CSS, Bootstrap (available in resources), or a combination of both. Set the font for the entire page to 'Trebuchet MS' and use a body background color of #fafafa. Apply a cadetblue background with white text to all buttons. Use gray for paragraph text. Set the logo dimensions to a width of 150px and a height of 130px. Ensure the design is closely mirroring the attached design.

Note: Refer to Figure 1 for a visual reference of the expected webpage layout and appearance after applying the appropriate HTML and CSS styling.

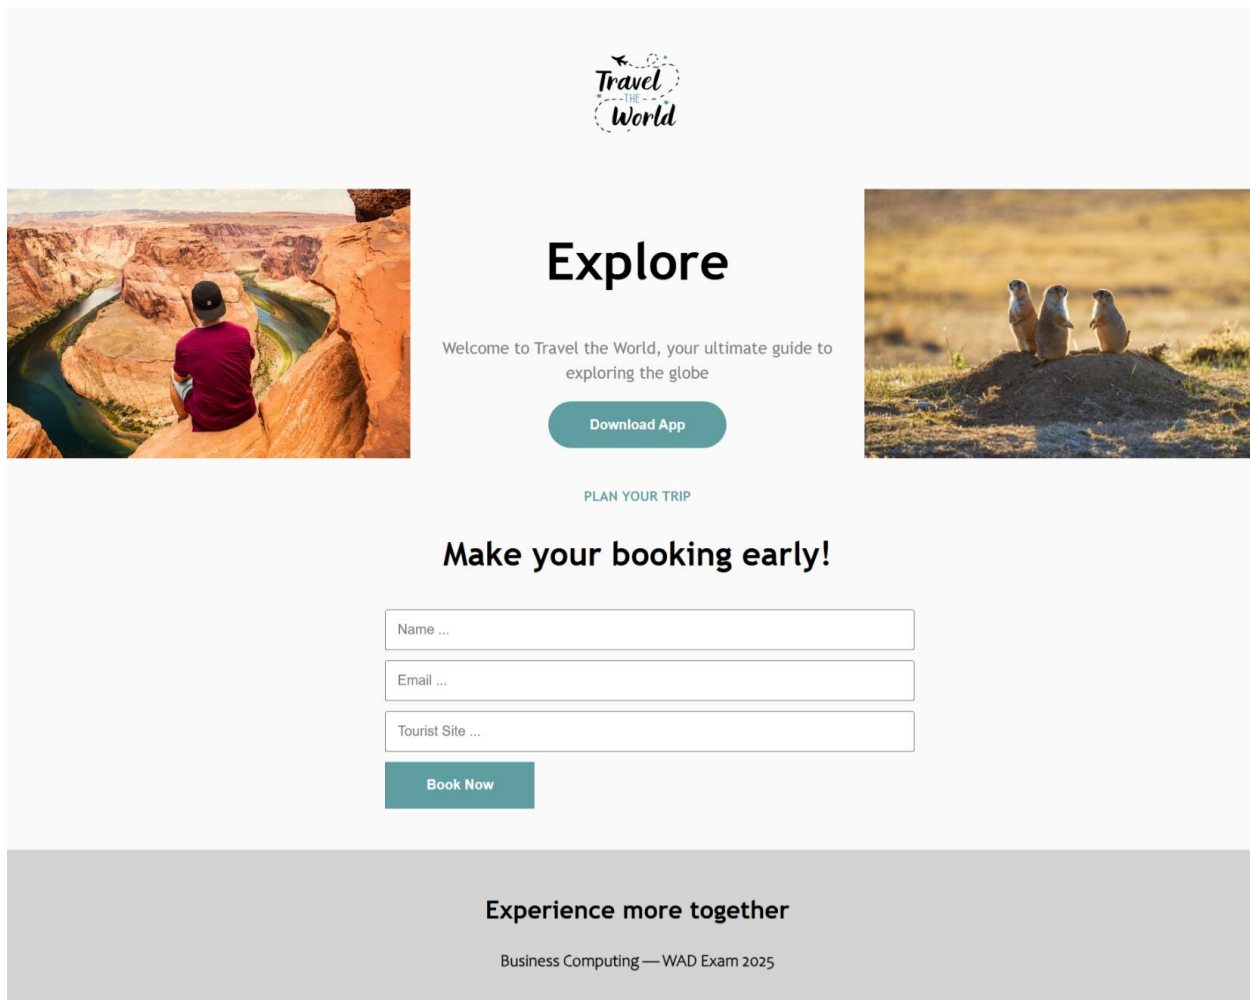

Figure 1

JAVASCRIPT (20 marks)

- c) Incorporate JavaScript to add interactivity to your page. When the Download App button is clicked, display an alert with the message: *“Thank you for choosing to download our app. Your download will begin shortly.”* as depicted in figure 2. (6 marks)

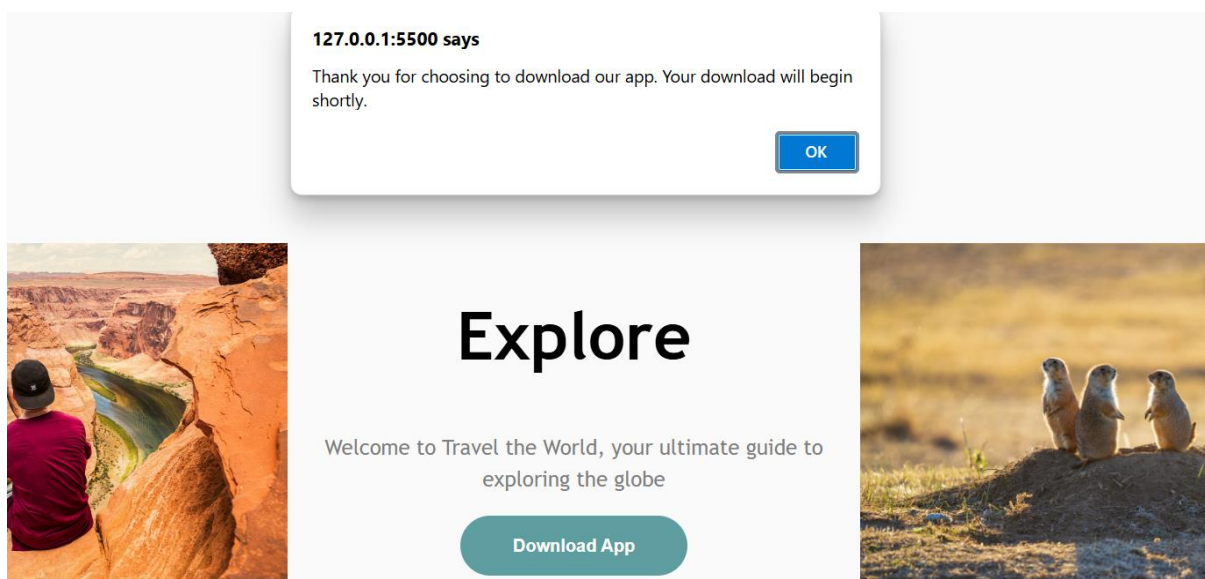

Figure 2.

- d) Below the Make booking title, include a hidden welcome message that becomes visible only after the user submits their name, email, and tourist site. This welcome message should not be shown by default. When the form is submitted, display a styled message (light green background #e6f4ea, bold, centered, rounded corners) reading: “*Thank you, [Name provided by user]. Your reservation has been successfully received. We look forward to traveling with you to [tourist site provided by user].*” as shown in figure 3. If any of the fields are empty, especially the Name field, display an alert prompting the user to complete all fields. (12 marks)

The figure shows a web form titled "Make your booking early!". Below the title is a light green message box with the text: "Thank you, Stephen. Your reservation has been successfully received. We look forward to traveling with you to Mabeere Ga Nyamwiru." Below this are three input fields: the first contains "Stephen", the second contains "stephen@gmail.com", and the third contains "Mabeere Ga Nyamwiru". At the bottom is a teal button labeled "Book Now".

Figure 3.

SECTION B – WRITE THIS SECTION IN THE ANSWER BOOKLET

PHP & SQL (40 marks)

You are required to write backend scripts that would handle the form data submitted from the account creation form (name, email, site). You are working with a MySQL database named **travel**, which contains a table called **bookings**. This table includes the following columns: **name**, **email**, and **site**. Complete the following tasks:

- In a file called **connection.php**, write PHP code that connects to the **meet** database using MySQLi. If the connection is successful, display the message: “*Database connected successfully.*” If it fails, display: “*Database connection failed.*” (10 marks)
- In another file called **process.php**, perform the following:
 - Include the connection.php file using PHP (2 mark)
 - Write a PHP script to collect the form data (name, email, and site) using the POST method. Declare variables for each of the inputs. 6 marks)
 - Write a PHP and SQL script that inserts the collected name, email, and site into the bookings table in the travel database. Display a message indicating whether the record was successfully inserted. (12 marks)
- In another file called retrieve.php, perform the following:
 - Write a PHP and SQL script that retrieves the inserted data i.e. name and tourist sites from the bookings table in the travel database. (10 marks)

- end of question paper.
