

MAKERERE UNIVERSITY
MAKERERE UNIVERSITY BUSINESS SCHOOL
FINAL EXAMINATION FOR BACHELOR OF BUSINESS COMPUTING OF
MAKERERE UNIVERSITY, ACADEMIC YEAR 2024/2025

COURSE NAME: WEB APPLICATION DEVELOPMENT

YEAR OF STUDY: II

SEMESTER: II

TIME: 9AM – 12PM

COURSE CODE: BUC2231

DATE: MAY 9, 2025

SHIFT ONE

INSTRUCTIONS

- i) This is a practical examination. Answer ALL questions in this exam.
- ii) Create a folder on the **desktop** in your name and registration number where all your project files will be stored for **section A**. *For example, if your name is James Mwanga and your registration number is 22/U/5432/PS, your folder name would be jamesmwanga22U5432PS. Notice that there are no spaces or forward slashes in the folder name. Any file saved outside this folder can't be accessed for assessment.*
- iii) Continuously save your work to avoid any interruptions in case of power outages.
- iv) You are allowed to sit for **ONLY ONE SHIFT** of the examination.
- v) All resources needed (photos, videos, frameworks) are provided on the desktop in the resources folder. Copy and paste inside your project folder.
- vi) Don't write on this question paper. All other university examination guidelines still apply.

Question

You have been tasked with creating a responsive one-page website for **Meet**, a social media platform that enables users to connect through group chats and video calls. The home page should introduce the platform, feature a prominent download button, and provide an interface where users can create an account by entering their name, email, and password. Refer to the layout shown in figure 1 for design guidance. The reference is for structure and style only—do not include the actual image in your website. Ensure the final webpage closely reflects the design and layout in figure 1.

SECTION A – 60 marks

HTML (20 marks)

- a) Using HTML, build a structured webpage that includes a header section with the Meet logo and a tagline that reads “*Group Chat for Everyone*”, along with a supporting paragraph and a Download button. Besides that, include circular user profile images to simulate an active community. Proceed to create a “Create an Account” section with a form containing three fields: Name, Email, and Password. End the page with a footer section containing social media links and copyright information.

CSS (20 marks)

- b) Style the webpage using either your own CSS, Bootstrap (provided in resources), or both. The font for the entire page should be set to 'Trebuchet MS', with a body background color of #fafafa. Buttons should have a cadetblue background with white text. Paragraph text should be gray. The logo should have dimensions of 180px width and 80px height. Ensure the design is closely mirroring the attached design.

Note: Refer to Figure 1 for a visual reference of the expected webpage layout and appearance after applying the appropriate HTML and CSS styling.

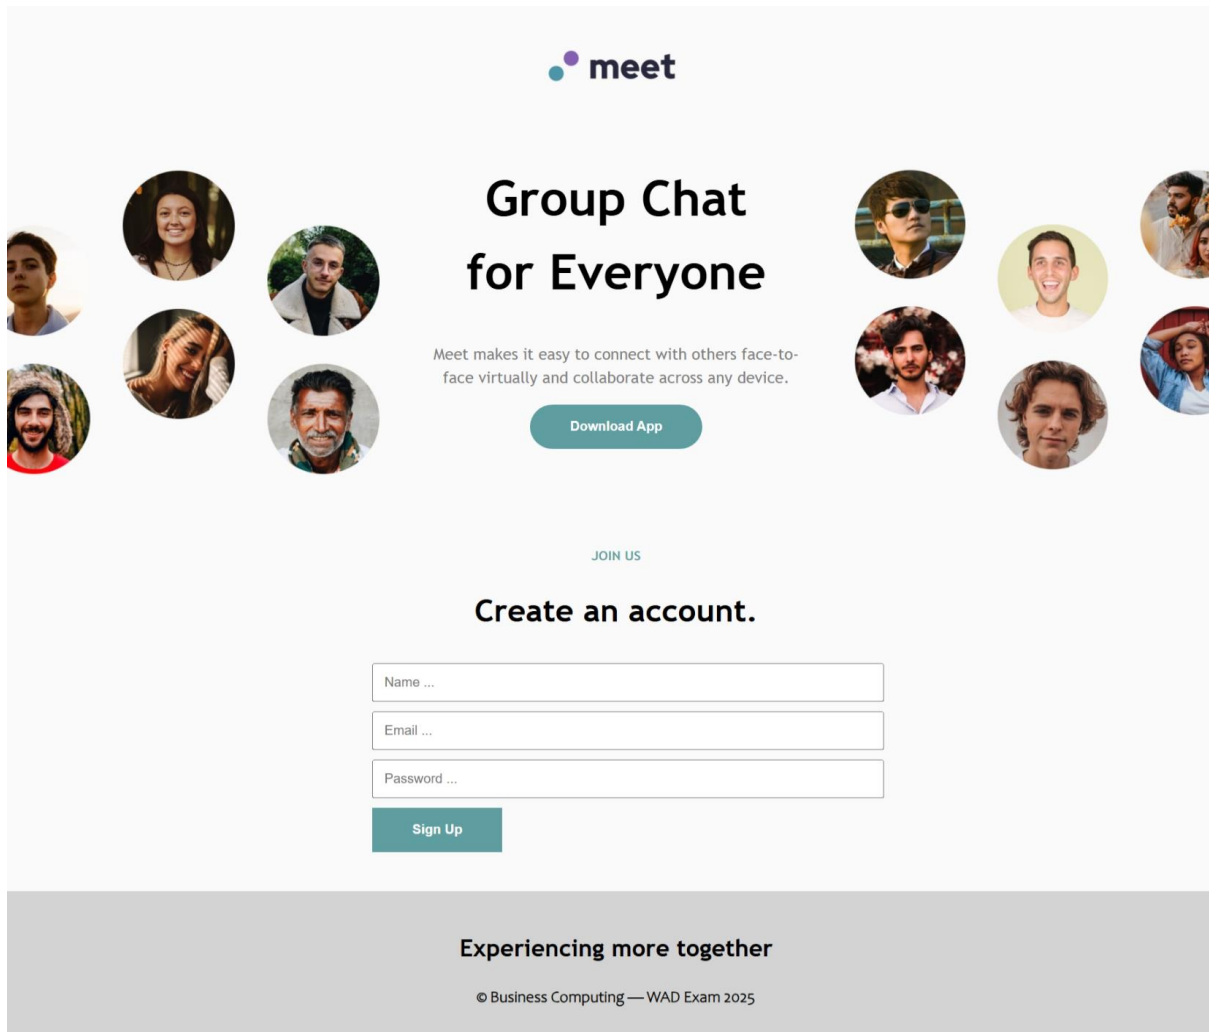

Figure 1

JAVASCRIPT (20 marks)

- c) Add JavaScript to bring interactivity to your page. When the **Download** button is clicked, show an alert with the message: *“Thank you for choosing to download our app. Your download will begin shortly.”* as shown in figure 2. (6 marks)

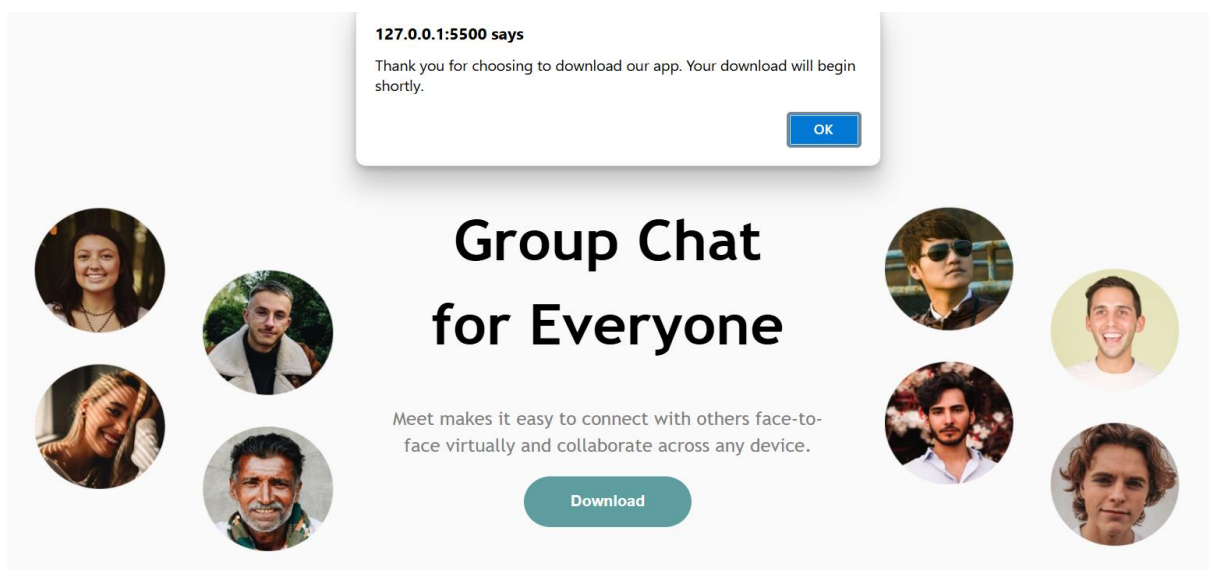

Figure 2.

- d) Below the Create account title, there is a hidden welcome message that becomes visible only after the user submits their name, email, and password. This welcome message should not be shown by default. When the form is submitted, display a styled message (light green background #e6f4ea, bold, centered, rounded corners) reading: “*Thank you, [Name provided by user]. Your account has been successfully created. A confirmation email will be sent to [email provided by user] shortly.*” as shown in figure 3. If any of the fields are empty, especially the Name field, display an alert prompting the user to complete all fields. (12 marks)

The screenshot shows a web form titled "Create an account." Below the title is a light green message box with the text: "Thank you, Leticia. Your account has been successfully created. A confirmation email will be sent to leticia@gmail.com shortly." Below this message box are three input fields: the first contains "Leticia", the second contains "leticia@gmail.com", and the third contains masked characters ".....". Below the input fields is a teal "Sign Up" button.

Figure 3.

SECTION B – WRITE THIS SECTION IN THE ANSWER BOOKLET

PHP & SQL (40 marks)

You are required to write backend scripts that would handle the form data submitted from the account creation form (Name, Email, Password). You are working with a MySQL database named **meet**, which contains a table called **users**. This table includes the following columns: **name**, **email**, and **password**. Complete the following tasks:

- In a file called **connection.php**, write PHP code that connects to the **meet** database using MySQLi. If the connection is successful, display the message: “*Database connected successfully.*” If it fails, display: “*Database connection failed.*” (10 marks)
- In another file called **process.php**, perform the following:
 - Include the connection.php file using PHP (2 mark)
 - Write a PHP script to collect the form data (name, email, and password) using the POST method. Declare variables for each of the inputs. (6 marks)
 - Write a PHP and SQL script that inserts the collected name, email, and password into the users table in the meet database. Display a message indicating whether the record was successfully inserted. (12 marks)
- In another file called **retrieve.php**, perform the following:
 - Write a PHP and SQL script that retrieves the inserted data i.e. name and email from the users table in the meet database. (10 marks)

- end of question paper.
